

WOMT Summary for June 21, 2011

The WOMT met and discussed the following:

The Smelt Working Group reported no recommendation for delta smelt or longfin smelt at this time and will continue to monitor salvage, survey data and hydrological conditions. The Working Group estimated that the overall risk of entrainment was low given the distributional data from recent surveys and believes that, based upon what is known of Delta conditions and delta smelt distribution, a modification of Project operations to protect delta smelt is not yet warranted.

DOSS reported no operational advice this week, however, agreed to provide an update on the subgroup green sturgeon rationale.
